

Solutions For Every Pallet[®]

Whether you own a single forklift or a fleet, we want to show you why Toyota Material Handling is the world's number one forklift company[#].

We've got the range to provide you with the best possible material handling solutions, plus the service and replacement parts support you'd expect from the world leader.

The benefits of dealing with Toyota Material Handling include:

- Australia's biggest range of materials handling equipment
- No.1 counter-balance forklift for over 25 years
- Leading product, safety and environmental initiatives
- 100% Toyota owned branches
- Australia's largest rental fleet with over 14,500 units
- Forklift rentals from 1 day to 5 years with flexible finance options available
- 350+ service support staff & 200+ service vans

And when you have to make every cent count without lessening productivity, a quality used forklift from Toyota Material Handling can be a cost-effective solution. We have a huge range of forklift brands priced to sell and ready to work, with options to suit all budgets. To view our extensive range of used forklifts simply visit www.tmhpreowned.com.au

There's never been a better time to get Australia's best range of material handling solutions working for you.

Toyota Service Advantage

At Toyota Material Handling, we place an important emphasis on expert service to keep your forklift working and your servicing costs as low as possible.

No matter what forklift brand you use, Toyota Material Handling's factory trained technicians use the latest diagnostic equipment to ensure a fast and accurate

diagnosis, that helps to save you time and money.

It's all part of our Toyota Service Advantage, and just another reason why a Toyota Material Handling service is genuinely better for your forklift and your pocket.

8 reasons why you should choose the all new...

...Toyota 8FB 1.5 - 3.0 tonne rated capacity battery-electric forklift.

1. High Energy Efficiency

The 8FB series achieves longer operating time by minimising energy loss. An all-new pedal-stroke detection regenerative brake system allows the 8FB to improve the efficiency of energy recovery thereby increasing operating times. More efficient motors and controllers and a new AC power system have resulted in an approximate five per cent improvement in operating times over the highly regarded 7FB Series model.

7FB Series

NEW MODEL

8FB Series (Operating time up to 5%[†])

† With same battery capacity

2. Superb Comfort and Visibility

Easy entry and exit and a comfortable operating posture the operator friendly design of the 8FB Series provides you with comfortable operation. Outstanding visibility is also provided via a lattice-design overhead guard, angled lower stay for the backrest, and an optimally positioned display contributes to comfort and reduced operator fatigue.

3. Stable and Smooth Operation

The 8FB Series is equipped with such features as a high-mount rear axle that positions the point of the rear axle support closer to the truck's center of gravity, that helps achieve stable turns. Other features such as an automatic turn-speed control combines lift-height and load-weight-sensing along with turn-speed control, automatically limiting the forklift's speed when turning and helping the forklift achieve more stable turns that match the operating conditions.

4. Environmentally Friendly

In addition to zero exhaust emissions - something only electric forklifts can promise – the 8FB Series has a hexavalent chrome-free design, and continues the Toyota concept of environmental friendliness. Additionally the Toyota 8FB is manufactured to be 99% recyclable.

5. Low Maintenance Costs

Through its structure and layout of the drive motor, load-handling motor, and controller compartment, the 8FB Series achieves high water-resistant performance. Also equipped with features that contribute to longer battery life, the 8FB Series helps maximise the ease and efficiency of your operation. No motor brushes or contactors on the AC Power provides for significant reductions in parts and labour costs for maintenance.

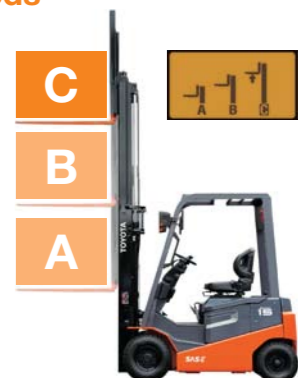

6. Exclusive Safety Features

The 8FB series features an Operator Presence Sensing system (OPS) that senses if the operator is not in the normal traveling position and interrupts travel power and load-handling operation. An Anti-Rollback feature helps to ensure operation on slopes. Toyota's optional exclusive System of Active Stability with proven features such as the active-mast function controller and active steering synchroniser optimises productivity, helping to provide for a safer work environment.

7. Customisable to Your Needs

The new 8FB Series forklifts have a full array of customisable options available to meet your worksite needs. These include a height selector that simplifies load handling operation, a selection of operating levers, shock sensor to detect and warn collision impact, and a PIN code entry system to prevent forklift use by unauthorised personnel.

8. Built Toyota Tough

The world's largest forklift supplier*, Toyota has for over 50 years been a pioneer in forklift technology and a world leader in making forklifts more productive, safer, cost-effective and reliable. Built to the same exceptional standards of quality and reliability as Toyota's automotive products, it's no wonder so many customers choose Toyota forklifts time and time again.

BT Optio L-series order pickers

The all-new BT Optio L-series offer low level order picking for every application and type of goods. Elevating forks, elevating driver platform and controls, long forks – even a version combining all of these features – are standard in the L-series. Operator comfort and drivability is maximised on the Optio via low instep height, E-man control system with improved servo steering, streamlined administration, logical placement of controls, frequency-adapted suspension, improved backrest, and speed reduction on cornering to reduce the risk of accidents and help provide for a safer work environment.

Raymond 7000 series forklift

The new 7000 Series Reach forklift sets a new standard in productivity and efficiency. The 7000 Series offers increased travel speeds, lift speeds, lower speeds and reach and retract speeds, reducing the cycle time per pallet stored for increased productivity. Intuitive ergonomics make the 7000 Series easy to drive, offering clear vision, precise control, and smooth handling. An innovative suspension system creates superior load stability at greater heights. The 7000 Series' regenerative braking and regenerative lowering saves energy and reduces component wear, and offers longer battery shift life and more efficient use of power, lowering your overall energy costs.
