## TOUGH, POWERFUL, RELIABLE

The TB325R is the newest addition to Takeuchi's 300-Series excavator lineup. This new model features a short tail-swing design which decreases the amount of overhang from the counterweight resulting in improved maneuverability and increased productivity on confined job sites. Due to its compact size and light weight, the TB325R can be easily transported.

The TB325R features numerous upgrades and operator comfort features that now come standard on the new 300-Series excavator line-up. These features include a completely redesigned automotive styled interior with intuitive, hydraulic pilot controls for precise operation, a 3.5" display panel and a centralized rocker switch bank. The operator's station size is increased from the previous model, the TB23R and it is very roomy in the short-tail industry. These new features pro-

vide the operator with unmatched comfort and visibility in a machine designed for optimum productivity, performance, and reliability.

Standard features on the TB325R include an automatic fuel bleeding system which eliminates the need to manually prime the fuel system, automatic engine deceleration which helps conserve fuel, drain on the floor provides easier clean out and a heavy-duty wraparound counterweight which helps protect vital machine components. Additional features available on the TB325R include an LED work light package, multiple auxiliary hydraulic circuits, and an optional Takeuchi Fleet Management (TFM) telematics system.
