# TOUGH, POWERFUL, RELIABLE

The TB210R features many upgrades that will enhance operator comfort, efficiency, and serviceability. To improve fine control and reduce fatigue, the TB210R now features pilot operated joystick controls that are low effort and responsive to operator input.

Additionally, an optional ISO/G pattern change valve has been added enabling the operator to choose their preferred operational pattern. The boom cylinder is now mounted on top of the boom for greater

protection and improved routing of the hydraulic lines which are run through the boom and arm. A hydraulically retractable track frame and the addition of a foldable ROPS frame allow it to easily pass through a standard doorway.

To reduce the likelihood of rear swing impacts, the TB210R also features a short tail swing design. Despite its compact dimensions, service access is exceptional thanks to the tilt-up seat pedestal and access panels.
